Summary

This country profile provides an overview of the context for Reducing Emissions from Deforestation and forest Degradation and enhancing forest carbon stocks (REDD+) in Papua New Guinea (PNG). It examines the drivers of deforestation and degradation in PNG, describes the institutional and political-economic context within which REDD+ is being developed, and describes the evolution of a national REDD+ strategy and associated policies and legislation during 2008-2012. It highlights the opportunities and challenges of developing REDD+ policies that can provide climate-effective, cost-efficient and equitable outcomes for PNG.
