Summary

This report provides worked examples showing how multiple benefits can be incorporated into spatial planning for REDD+ at the national level in the specific case of Vietnam. The maps illustrating this summary report were selected from a series of over 40 maps produced by the study. The maps presented here are made available to national and international stakeholders for immediate use in planning for REDD+ demonstration activities at the sub-national level. It is hoped that the example maps presented here stimulate further analysis in support of Vietnam's National REDD+ Action Programme.
